

MAKE YOUR MARK ON THE MARKET, NOT ON THE PLANET

Choose technology with a lower environmental impact, build brand equity and make progress toward sustainability goals. EPEAT can help.

EPEAT® is the definitive global registry for greener electronics. Products on the EPEAT registry meet a more comprehensive, forward-looking set of environmental criteria than technology rated by any other system. Not only do EPEAT-registered products adhere to the latest technical specifications of ENERGY STAR®—and may help lower your power bill—they are designed, manufactured and produced in a way that reduces materials use and solid waste, decreases emissions and increases recyclability. Show progress toward your sustainability goals and build brand equity by leading efforts to reduce the negative impacts of IT.

EPEAT's searchable database includes thousands of electronics from nearly 50 manufacturers—more than any other environmental rating system. And because EPEAT covers more than 40 countries, global enterprise purchasers can employ EPEAT as a uniform specification for dozens of geographies. Enterprises, educational institutions and governments around the world are already using EPEAT to compare greener electronics head to head, and make informed purchasing decisions.

Become an EPEAT Purchasing Partner and get public recognition for your green initiatives

When you use EPEAT to purchase greener electronics, be sure to get the recognition you deserve—and the resources you need—by joining our Purchasing Partner Program. Your organization will be featured on the EPEAT website and positioned as an environmental leader in media outreach materials and case studies.

Why EPEAT?

Only EPEAT combines comprehensive criteria for design, production, energy use and recycling with ongoing independent verification of manufacturer claims. It's an easy-to-use resource for businesses wanting to find environmentally preferable products.
